

Break-even sits $4.8\times$ to $43\times$ below the cost of trading — a gap of one to two orders of magnitude, not a margin

*cell 1 only (BSQ, OHLCV-only), 3 units at the pinned $h = 15$ — one arm of a 2×2 that never ran.
Bars are 95% bootstrap intervals; the most favourable upper bound, 0.0396%, is still $2.5\times$ short.*
